

ARSH SHIVAYACH

AI Automation Engineer | Internal Tools Builder | Rapid MVP Developer | Senior Systems Engineer

Ghaziabad, India | arshshivayach@gmail.com | +91-8958980048 | [linkedin.com/in/arshshivayach7576ba198](https://www.linkedin.com/in/arshshivayach7576ba198)

PROFESSIONAL SUMMARY

Senior Systems & AI Automation Engineer with 6+ years of experience building performance-sensitive software systems, internal business tools, workflow automation platforms, and AI-assisted applications. Specialized in rapidly delivering custom automation systems, AI-powered workflows, business dashboards, developer tools, SaaS MVPs, and operational software using AI-assisted accelerated development workflows. Strong background in C++, Qt, desktop systems, architecture, performance optimization, crash analysis, and large-scale engineering environments. Experienced in taking projects from idea → architecture → MVP → deployment independently with fast execution cycles. Highly proficient in using ChatGPT, Claude, Cursor, Windsurf, GitHub Copilot, Gemini, and AI coding agents to accelerate development and prototype production-grade systems.

TECHNICAL SKILLS

Programming & Engineering:	C++, Qt, STL, OOP, SQL, Shell Scripting, TypeScript, JavaScript, React, API Integrations
AI-Assisted Development:	ChatGPT, Claude, Cursor, Windsurf, GitHub Copilot, Gemini, AI Coding Agents
Automation & Systems:	Workflow Automation, Internal Tools, Dashboard Systems, SaaS MVPs, Business Process Automation, Rapid Prototyping, Debugging & Performance Optimization
Workflows & Platforms:	Git, Perforce, CI/CD, Jira, Code Reviews, Regression-Safe Delivery Linux, Windows

SPECIALIZED SERVICES

- AI Workflow Automation
 - Internal Business Tools
 - SaaS MVP Development
 - AI Integrations
- Dashboard Systems
 - Business Process Automation
 - Developer Productivity Tools
 - Rapid Prototyping & Consulting

PROFESSIONAL EXPERIENCE

Graebert GmbH — Software Engineer

2023 – Present

- Contributed to performance-sensitive C++/Qt CAD software involving geometry processing, UI workflows, and enterprise engineering systems.
- Shifted engineering workflows toward specification-first AI-assisted delivery models for faster and more reliable implementation.
- Utilized Windsurf (Claude Sonnet), GitHub Copilot, ChatGPT, Gemini, and AI coding agents for rapid implementation, advanced debugging, refactoring, automation, and feature acceleration.
- Developed executable specifications, technical architectural documentation, and streamlined AI-assisted engineering workflows.
- Performed deep-dive debugging, rigorous crash analysis, regression prevention, performance tuning, and production stabilization.
- Collaborated seamlessly with QA and engineering teams to ensure release-ready delivery and controlled deployment cycles.

Agiliad Technologies — Senior Software Engineer

2022 – 2023

- Designed and implemented C++-based medical imaging workflows integrating Fiji ImageJ and pugiXML for highly configurable processing systems and automated pipelines.
- Modernized and improved legacy architecture using custom automation tooling and scalable engineering best practices.
- Developed workflow-oriented processing utilities aimed at significantly reducing manual engineering effort and overhead.
- Collaborated across cross-functional engineering and QA teams for proactive debugging, system validation, and production stability.

Amdocs India — Software Engineering Associate

2020 – 2022

- Delivered enhancements and critical defect fixes in enterprise-scale C++ and SQL-based telecommunication billing systems.
- Participated in the complete Software Development Life Cycle (SDLC) including implementation, code reviews, debugging, release coordination, and CI workflows.
- Supported intensive production debugging, critical patch releases, rollout validation, and enterprise operational reliability.

SELECTED PROJECT EXPERIENCE

AI-Assisted Workflow & Engineering Automation Systems

- Designed and implemented specification-first AI-assisted engineering workflows for accelerating software delivery and reducing manual implementation effort.
- Built structured execution pipelines using AI coding agents, reducing development iteration cycles and improving delivery speed.
- Created reusable technical specifications, architectural guidelines, and implementation structures for AI-supervised development systems.

Internal Tooling & Rapid MVP Development

- Developed internal automation utilities and operational tools for improving engineering workflows and reducing repetitive manual tasks.
- Built scalable software foundations and MVP-ready technical architectures optimized for fast deployment, debugging, extensibility, and operational efficiency.

EDUCATION

PG Diploma in Advanced Computing (CDAC - ACTS)

2020

Bachelor of Technology — Electronics & Communication Engineering

2015 – 2019

Chandra Shekhar Azad University, Kanpur
